Open-String Field Theory : A algebra, Renormalization Group and Boundary States

Toshio Nakatsu
Osaka University

I want to clarify Sen's conjecture on open-string tachyon condensation. At present, for this purpose, I want to define a relevant boundary open-string field theory and then construct a map between several descriptions of open-string field theory. Geometry of renormalization group and concept of homotopy associative algebra will become important. Some progress may be found in my recent paper (hep-th/0105272).
